Build the Yangkhil Resort website in Astro (Ballena-style design)

You are building a single-page luxury resort website for **Yangkhil Resort** (Bhutan) using **Astro**. The visual design must closely match the reference site **https://ballenacabo.com/** — same layout system, typography, colour palette, spacing, motion and interaction patterns. Only the brand name, copy and imagery change. Do not copy Ballena's logo, photos or text; use placeholders for images and the Yangkhil copy below.

---

1. Tech stack

- **Astro** (latest stable), static output, TypeScript.
- Plain CSS with CSS custom properties (or Tailwind if preferred, but tokens below must be exact). No UI frameworks.
- **GSAP + ScrollTrigger** for scroll animations, **Lenis** for smooth scrolling, **Swiper** for the card slider (the reference site uses exactly these three).
- One Astro component per section in `src/components/`, content in `src/data/site.ts` so copy and images are easy to swap.
- Images via `astro:assets` `<Image>`; hero uses a muted, looping, autoplay, `playsinline` background `<video>` with a poster image.
- Fully responsive (desktop, tablet, mobile), accessible (semantic HTML, alt text, focus states, `prefers-reduced-motion` disables animations).

2. Fonts (critical — match exactly)

Role	Reference font	Weights used
Headings, nav, buttons, labels, logo	**Sweet Sans Pro** (wide engraved-style caps)	300, 400, 500, 700
Body paragraphs	**TT Commons Pro**	400, 500

- Both are commercial fonts. If license files are placed in `public/fonts/`, load them with `@font-face` (`font-display: swap`).
- Until then, use these fallbacks so the look stays close: headings **"Tenor Sans"** (or "Josefin Sans" 400), body **"DM Sans"** or **"Figtree"** from Google Fonts. Keep the font stack in one CSS variable so swapping is one line.

- Footer giant wordmark: a tall, condensed, thin display style stretched edge-to-edge (use an SVG of "YANGKHIL" or a condensed font like "Antonio" 200 scaled to 100% width).

3. Design tokens

```
:root {
  --ink: #03090D;          /* primary text, dark sections */
  --cream: #F8F2E5;        /* main page background */
  --offwhite: #F9FBF3;     /* about section background */
  --white: #FFFEFD;        /* text on images/buttons */
  --terracotta: #C2644F;   /* accent split section */
  --sage: #779580;         /* contact card */
  --grey: #8C8C8C;         /* muted labels */
  --font-display: "Sweet Sans Pro", "Tenor Sans", sans-serif;
  --font-body: "TT Commons Pro", "DM Sans", sans-serif;
  --title-xl: clamp(2.5rem, 4.75vw, 4.6rem);   /* ~73px at 1534px wide */
  --title-l:  clamp(2rem, 3.35vw, 3.25rem);    /* ~51px */
  --title-m:  clamp(1.1rem, 1.4vw, 1.35rem);   /* ~21px card titles */
  --body: 1rem;                                /* 16px, weight 500, line-height 1.2 */
  --link: 0.78rem;                             /* 12.4px */
  --label: 0.67rem;                            /* 10.6px, small caps labels */
  --ease: cubic-bezier(.65,0,.35,1);
}
```

Typography rules:

- All headings: `--font-display`, weight 400, **UPPERCASE**, `letter-spacing: 0.025em`, `line-height: 0.9` (very tight, stacked lines).
- Body: `--font-body`, weight 500, 16px, line-height 1.2, max-width ~30ch, sits far below its heading.
- Links/buttons: display font, 500, uppercase, 12.4px, `letter-spacing: 0.05em`, followed by a small **solid circular arrow icon** (16px circle, arrow inside). Hover: arrow nudges right, 0.3s ease-in-out.
- Small section labels (e.g. "SEA AND DESERT", "NATURE RETREAT", "ABOUT"): 10–11px uppercase, top-left of the section.

4. Header (floating pill)

- `position: fixed`, top ~10px, horizontally centred, ~640px wide, ~53px tall (full width minus 16px gutters on mobile).
- Translucent tinted bar (`rgba` grey/ink ~30% + `backdrop-filter: blur(12px)`); tint adapts to the section beneath.
- Three zones: **left** "BOOK NOW" small bordered button; **centre** "YANGKHIL" wordmark (display font, wide tracking); **right** two-line hamburger.
- Menu open: the pill expands downward into a white panel (same width) with centred uppercase links — HOME, ROOMS, DINING, EXPERIENCES, GALLERY, LOCATION, ABOUT — then INSTAGRAM ↗ and GIFT CARDS ↗, and at the bottom a rounded image card with the caption "A REFLECTION BETWEEN" (left) and "MOUNTAIN AND VALLEY" (right) with a small logo mark in the centre. Hamburger morphs into an X. Animate height + fade with GSAP.

5. Sections (in order)

1. **Hero** (`100vh`, ink background): full-bleed background video with a dark overlay. Title-xl in white, left-centre, three lines: *"SHAPED BY MOUNTAINS. / GROUNDED IN / THE VALLEY"*. On load the video frame starts inset (dark border visible) and expands to full bleed while the headline reveals word by word (split into `.word > .word-inner`, slide up from `translateY(100%)` with stagger).

2. **Text over image** (`100vh`): full-bleed resort exterior photo. Top-left label "MOUNTAIN AND VALLEY". Big title-xl at top-left: *"YANGKHIL, WHERE STILLNESS COMES NATURALLY"*. Bottom-right small paragraph: *"Guided by time, light, and the rhythm of the mountains. Bhutanese hospitality rooted in place, led by warmth, and made to be shared."* + link "EXPLORE MORE".

3. **Split content – accent** (`100vh`, two equal columns): left = full-height image (signature Bhutanese dish or room), right = **terracotta** panel. Title-l white at top: *"STAYS THAT HOLD THE MOMENT"*. Paragraph + "VIEW ROOMS" link pinned to bottom of the panel. Left image has a subtle parallax.

4. **Full image** (`100vh`): single full-bleed landscape photo (gardens, terrace, firepit), slow scale 1.1 → 1 on scroll.

5. **Content intro** (cream background, generous ~106px vertical padding): small label "NATURE RETREAT" at far left; heading title-l offset to ~1/3 of the width: *"WHERE THE RESORT MOVES WITH THE LANDSCAPE. DISCOVER OUR RETREAT IN NATURE"*. Paragraph below + "EXPLORE GALLERY" link.

6. **Card slider** (cream, Swiper): 3 visible tall cards (~4:5, 8px radius, small gaps), more off-screen. Each card: full image with gradient, title-m centred at the top in white, short two-line text + "EXPLORE MORE" link centred at the bottom. Cards: **ROOMS** ("Rest shaped by the mountains"), **DINING** ("Flavours from the valley"), **EXPERIENCES** ("Ways to wander beyond the resort"), **GALLERY** ("Where atmosphere is built through time"), **GIFT CARDS** ("Passed along, meant to be shared"). Below: a centred pill control with ← progress line → .

7. **About** (off-white background): label "ABOUT" far left; a tall portrait image (black-and-white staff/host photo) at ~1/3 width; title-l to the right: *"HOSPITALITY THAT FEELS NATURAL"*; paragraph aligned to the image bottom: *"Yangkhil Resort is a mountain retreat in Bhutan, where every stay responds to its landscape and the way people come together."* + "ABOUT US" link.

8. **Contact & location** (full-bleed aerial photo, ~100vh): centred **sage-green** rounded card (~640px wide). Top-left label "CONTACT AND LOCATION"; bottom-left title-m-large white: *"A MEETING POINT, NATURALLY"*; bottom-right small uppercase details: CHECK-IN 2:00 PM · CHECK-OUT 12:00 PM · PHONE [+975 XXXXXXXX] · [ADDRESS, BHUTAN] (placeholders).

9. **Footer** (cream): 3 columns divided by a thin vertical rule — (a) small image + short brand paragraph + link; (b) "NAVIGATION" label + uppercase links incl. INSTAGRAM ↗; (c) "NEWSLETTER" with underline-only inputs (EMAIL, FIRST NAME, LAST NAME) + "SUBSCRIBE" arrow button. Then a thin horizontal rule, then the **giant "YANGKHIL" wordmark spanning the full width**, and a bottom bar: "YANGKHIL RESORT © 2026" left, "PRIVACY NOTICE" right (tiny caps).

6. Motion & interaction

- Lenis smooth scroll across the page (`lerp ~0.1`), synced with ScrollTrigger.
- Every heading: word-by-word reveal on enter (masked slide up, stagger 0.05s, 0.9s, `--ease`).
- Paragraphs/links: fade up 20px on enter.

- Images: inner image scale 1.15 → 1 + slight parallax inside an `overflow:hidden` frame.
- Header tint switches per section (light-on-dark vs dark-on-light) using ScrollTrigger and `data-header-theme` attributes on sections.
- All transitions 0.3s ease-in-out for hovers; respect `prefers-reduced-motion`.

7. Layout & responsive

- Page gutter ~39px desktop, 20px tablet, 16px mobile. No horizontal scroll.
- Under 768px: split sections stack (image on top), slider shows 1.2 cards, footer columns stack, header pill is full width, headline sizes use the clamps above.

8. Deliverables

- Clean Astro project (`npm create astro`), `README` with setup + how to add licensed fonts and swap images.
- Placeholder images in `src/assets/` named by section (`hero.mp4`, `hero-poster.jpg`, `exterior.jpg`, `split-room.jpg`, `garden.jpg`, `card-rooms.jpg`, …) so real Yangkhil photos can be dropped in.
- Lighthouse 90+ for performance and accessibility. Run `npm run build` and fix all errors before finishing.
